

# VCI CHAMBER PLUGS

## PRODUCT BENEFITS:

- Advanced Vapor Technology
- Protects all metals from rust & corrosion
- Loads into firearms
- Hangs in gun cabinet or safe

The Inhibitor Rust Preventative System is a vapor process that penetrates into the smallest cracks and crevices on your valuable metal surfaces and stops rust and corrosion. Unlike desiccants that attempt to continually absorb moisture, The Inhibitor VCI plugs advanced vapor technology blends with moisture and oxygen, effectively neutralizing it, preventing the corrosion process from starting. When used as snap caps in the chambers of firearms, the rust and corrosion preventing vapors protect the barrel, chamber, and firing mechanism. When used as a safe plug, the non-toxic vapors efficiently fill up any enclosed area, such as gun safes/cabinets, tool boxes, tackle boxes, etc., and can last up to 2 years.

*Custom runs available with corporate logos. Call The Inhibitor for full details.*

## How The Inhibitor Works

The chemical compound used in The Inhibitor System is called VCI (Volatile Corrosion Inhibitor). The VCI slowly vaporizes into an enclosed area, placing an invisible barrier over a wide variety of metal surfaces. These vapors are capable of penetrating into the smallest cracks and crevices, blending with hydrogen and oxygen (moisture), rendering them incapable of starting the corrosion process. The Inhibitor's VCI has a proven track record of protecting the entire spectrum of both ferrous and non-ferrous metals such as Iron, Brass, Steel, Bronze, Aluminum and many others.
